Full-Stack Product Engineer (TypeScript / React) — AI-curious

Full-stack engineer with 7+ years of experience shipping production systems in TypeScript and React in startup and high-ownership environments. I specialize in taking features from concept to deployment — designing data models, building backend services, and delivering polished user experiences that scale. I’m at my best on small, fast-moving teams where engineers own product direction, move quickly, and solve ambiguous problems end-to-end. For the past 3 years, I’ve volunteered with The Parris Foundation as a private tutor and instructor, which keeps me close to how students learn and what educators need day-to-day. I like shipping scrappy prototypes to validate ideas quickly, then refining what works into polished, scalable product experiences.

SKILLS & OTHER

Languages: TypeScript (7+ yrs), JavaScript, SQL, Go, Python | **Frontend:** React (7+ yrs), modern component architecture, performance optimization | **Backend:** Node.js, Express-style APIs, GraphQL, BFF / microservices | **Database:** PostgreSQL (data modeling, query optimization) | **Infrastructure:** AWS, Docker, Heroku, GCP | **Focus:** End-to-End Product Ownership, Startup Execution, Developer Tooling, Feature Delivery, AI-enabled product experiences (interest)

PROFESSIONAL EXPERIENCE

Clear Channel Outdoor, Remote/New York, NY

May 2021 - November 2025

Software Engineer

- Owned and shipped core product workflows in React + TypeScript from idea → production, serving 1,000+ active users and enabling rapid iteration in a fast-moving product environment.
- Implemented a reusable design system + UI primitives to raise consistency and speed across the product, which enhanced the UI consistency by 30%.
- Architected and shipped Go-based BFFs and microservices to decouple a legacy monolith, improving deployment safety and reducing time-to-production for new features by 20%.
- Owned and built a Python-based backend service that reconciled large datasets across distributed systems, and reduced sync time and improved downstream decision-making by 70%.
- Took multiple features from technical design through production, spanning PostgreSQL data models, Ruby services, and React UIs, with a focus on reliability and fast iteration.
- Collaborated with design, operations, and data teams to identify key pain points and delivered solutions that improved performance and reliability by 10%.
- Mentored engineers in adopting React and TypeScript that improved code quality, collaboration and increased team efficiency by 10%.
- Worked directly with product and design to scope ambiguous problems, define technical approaches, and ship incremental releases with feature flags.

employHER, Remote/Seattle, WA

April 2018 - May 2021

Lead/Founding Software Engineer

- Built the initial React + TypeScript product surface for a venture-backed startup, enabling rapid experimentation across onboarding and profile workflows.
- Acted as a founding engineer, making product + technical decisions and owning features idea → production and setting the bar for production quality and delivery speed.
- Designed APIs and relational data models in PostgreSQL to support profile discovery, dashboards, and role-based access — ensuring scalable, performant production systems.
- Collaborated with design, product, and founders to launch 5+ user-friendly features that enhanced clarity and minimized friction for candidates and hiring teams.
- Shipped in short iteration cycles, prototyping quickly and polishing what validated in close collaboration with founders and stakeholders, prioritizing impact and speed over process

CDK Global, Seattle, WA

January 2018 - December 2020

Implementation Specialist

- Managed DNS configurations and IP records for 10+ enterprise clients, implementing secure and reliable integrations using Windows and Linux environments.
- Supported 100+ clients with technical support and troubleshooting during SaaS migrations, utilizing tools like AWS and Google Cloud.

VOLUNTEER

The Parris Foundation, Harlem, NY

September 2022 - Present

Private Tutor & STEM Instructor

- Tutored and instructed students regularly; developed patience, clarity, and strong user empathy for how people learn and where they get stuck.
- Motivated by improving outcomes for students and supporting educators with tools that make daily work easier.

EDUCATION

Bachelor's of Science Computer Science, Western Washington University, Bellingham, WA

President of The Association for Women in Computing
